

WHAT IS OPTIMAL BRAIN ORGANISATION?

The Optimal Brain Organization profile is **invaluable to educators and children** alike as it identifies sensory and brain preferences and their implication for such activities as **reading, writing, math, memory, motivation** & relating to people. The Optimal Brain Organization profile provides a new understanding and appreciation of the child's own uniqueness and the special ways he functions in his world. It also demonstrates how learners change for better or worse under stress, to cope with the challenges in life. The Edu-K processes you will learn in this course offer the opportunity to access all sensory channels in order to make use of all modalities, bringing positive, healthy, and integrated resources to new learning situations.

WHAT YOU WILL LEARN

The theory behind Optimal Brain Organisation: The four balances and when to use them; **9 new movements**; Your own processing and profile; The Dynamic Brain.

The **32 profiles** supply information about how we take in, assimilate, and process sensory information and then respond to and express new learning. They are offered here as useful guides for students, parents, teachers, counselors and anyone else who chooses to support the learning process.

The profiles provide important clues about a Learner's Preferences in school, at home and even at work. This helps us to understand and anticipate which learner may have difficulty with particular tasks and types of information.

Example: Profile A

Logic Dominant, All Sensory-Motor Modalities Available

- Learns best by focusing on the details. Processes by analysis, verbalization and writing.
- During stress, may have difficulty seeing the big picture (“can’t see the forest for the trees”).
- Suggestion activities: an integrative balance of art, music and freeform movement combined with cognitive endeavors will be highly beneficial.
